

SYNERGIZE Process Server

Automates business processes and easily adapts to change, enabling organizations to enhance operational efficiencies and gain competitive advantages

BENEFITS OF SYNERGIZE PROCESS SERVER (SPS):

- From requirement to process, implementation is measured in hours, not days or weeks
- All processes are run in the same uniform manner from a central console, so any authorized person is able to monitor, start and stop processes
- No need to monitor and manage many programs all over the network
- Organizations achieve near immediate results for minimal investment
- All-in-one solution; including an easy to use graphical modeling designer, a scalable execution engine, and monitoring tools
- Standards-based; which prevents vendor lock-in and ensures that your data and documents are not held hostage
- Scalable; there is no limit to the type or complexity of a process that can be automated

Synergize Process Server (SPS) is an enterprise-class business process management (BPM) solution that is designed to easily and quickly automate data and process flows, and inter-connect processes, applications and workflows using industry standards. Selected action items are easily changed through a visual drag and drop environment, without disrupting the entire process.

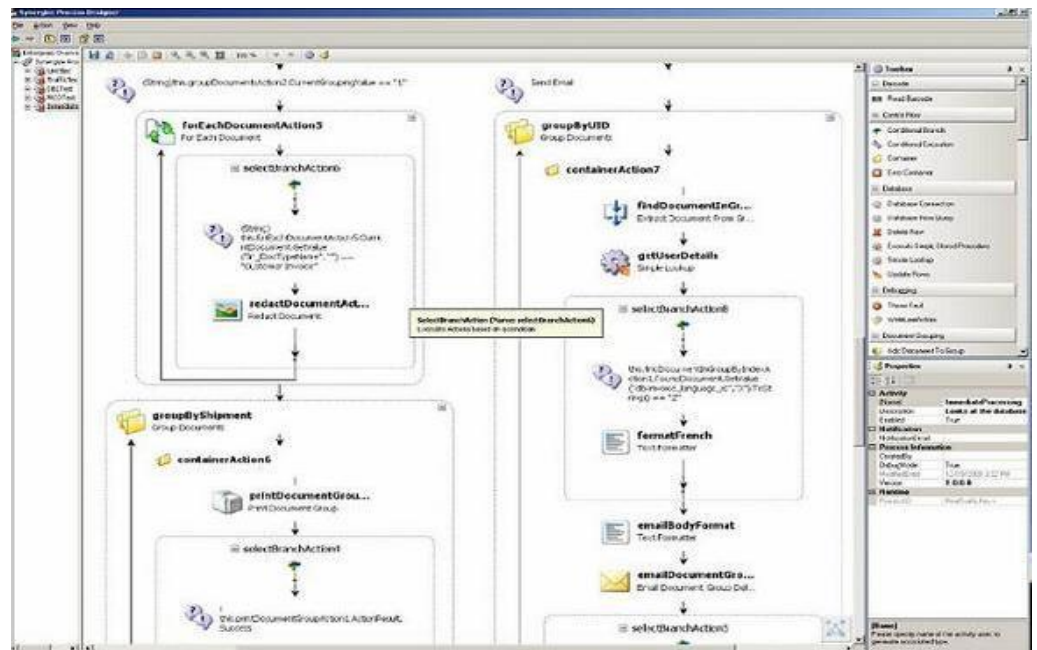

SPS is unique because it enables automation of not only Synergize system-to-system data flows but also common human-to-system or system-to-human business processes.

SPS allows companies to centrally manage all their processes, data flows, integration and workflow from one application. This includes all the application touch points, database connections, protocols, web services, formats and schemes, mapping rules, triggers, alerts and notifications. For IT staff and their developers, SPS offers an easy and clear-cut way to deliver highly complex processes for changing business needs.

The intuitive and graphical business process mapping tools enable organizations to map, visualize and implement process automation reliably and efficiently. The flexibility of the tool easily keeps pace with evolving and new processes.

Figure 1: Visual Design Tool

Users locate the various pre-built action items on the right from the library and drag-and-drop them onto the canvas in the required sequence.

TRAINING

Microdea's professionally designed and presented courseware provides hands-on training to smoothly advance users from conceptual understanding to practical skill set, enabling you to more quickly realize the business benefits of your Synergize investment.

TECHNICAL SUPPORT

Microdea's Support and Upgrade Assurance (SUA) contract provides access to our in-house technical resources and to the latest developments in imaging technology. Clients with SUA contracts are entitled to the latest version of Synergize at no additional cost.

ABOUT MICRODEA

As developers of the innovative Synergize Document Automation Solution, Microdea provides clients with advanced document, workflow and process management technologies. This cost-effectively automates and streamlines their paper-intensive business processes.

Figure 2: Action Toolbox

The collection of Actions are combined together to form a process. Actions are best described as discrete functions, for example, open file, read barcode, email document etc. The idea being that each action is complete in of itself, and has many parameters that are exposed and can be configured to ensure that the action accommodates the required functionality. Actions can therefore be upgraded and enhanced individually without affecting any other actions. The SPS ships with a rich library of standard actions to ensure every facet of a process can be configured.

Process Server (SPS) Features:

- Design tool to help IT and Business Analysts collaborate and document their data flows, routing rules, and business processes
- Data Mapper that makes it easy to specify data transformation, mapping and validation rules to process incoming information
- Rules based routing which allows for complex rules to be specified that augment workflow tasks and automatically process flows with a precise runtime
- Workflow automation that is available through the Synergize Workflow designer application
- Available data process, schemas, and protocols to support processing of data in many formats whether, text, CSV, XML, PCL, and databases such as MS SQL, MySQL, DB2, Oracle, HL7, and EDI
- An open architecture that allows developers to extend the pre-packaged actions to create highly specialized business processes
- Implement consistent, streamlined and reliable process automations to reduce transactional costs

Synergize Software Solutions integrate people, paper and processes within organizations and extend process efficiencies and workflows to enhance customer relationships.

For more information on how Microdea's Synergize Process Server (SPS) will cost effectively automate your business processes, provide integration across your business systems and allow your organization to rapidly and easily adapt to change, contact us at marketing@microdea.com
