

SynergizePS is an all-in-one solution.

Included is fully integrated easy to use and understand graphical process modeling designer, a solid and scalable execution engine, and monitoring tools.

SynergizePS is standards-based.

Like all Synergize software offerings, Microdea sticks to Open standards to protect your investment. This prevents vendor lock-in, and ensures that your data, documents and intellectual property is never held hostage.

SynergizePS is Scalable.

The included library of pre-built "Actions" are all based on Microsoft .Net Workflow foundation, meaning 3rd party developers can create additional custom actions, using tools such as Visual Studio.

Synergize Process Server

SynergizePS provides organizations with an easy to use tool, that will cost effectively automate business processes, provide integration across your business systems and will allow your organization to rapidly and easily adapt to change.

Synergize Process Server makes it possible for business analysts and developers to quickly and reliably, create, deploy, maintain and enhance processes that address real world business needs instead of exhausting themselves and their budgets trying to custom code and maintain many piecemeal programs to address these needs.

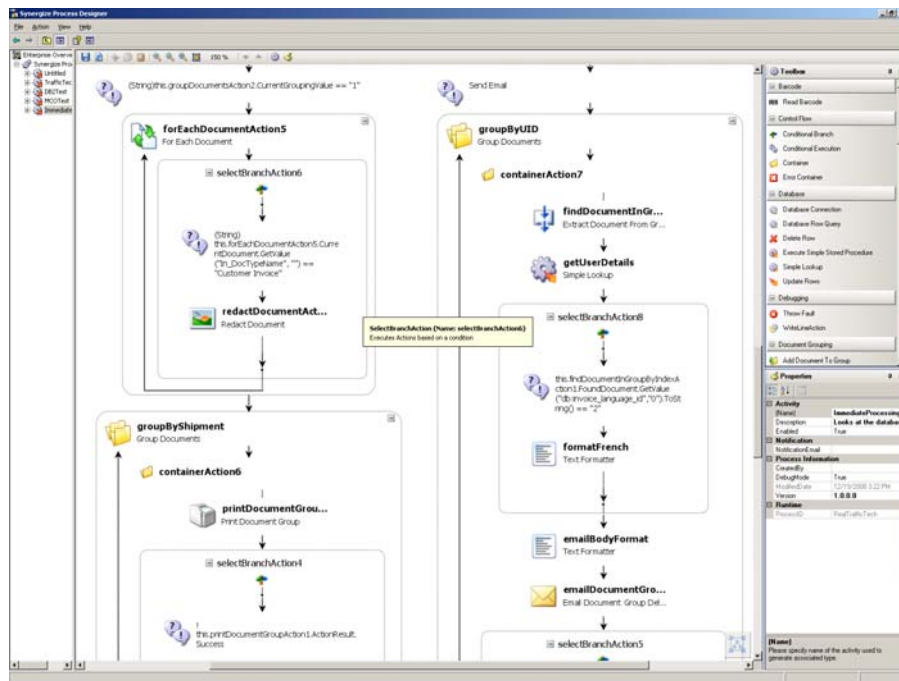

Synergize Process Server (SynergizePS) makes it easy to design, build, manage, deploy and maintain automated business processes.

Automate

SynergizePS makes creating, deploying, running and modifying processes easy. Using a completely visual drag and drop environment, simply take the selected action items and sequence them on the canvas to create the required process. Continue to move the actions around and adjust your process until you are satisfied. Once done your process is ready and can be set to run automatically.

This incredible power and flexibility allows you to take a business process need directly from concept to executable process within in hours versus days compared to traditional programming options. Once created processes execute reliably and in a consistent predictable manner, at the same time because all processes are uniformly created and deployed all processes remain accessible to management, and are not buried

under layers of proprietary one-off deployments or worse yet unable to be supported because "the person who wrote it" has subsequently left the organization.

Integrating people, paper and processes

Training

Microdea's professionally designed and presented courseware provides hands-on training to smoothly advance users from conceptual understanding to practical skill set, enabling you to more quickly realize the business benefits of your Synergize®

Technical Support

Microdea's Support and Upgrade Assurance (SUA) contract provides access to our in-house technical resources and to the latest developments in imaging technology. Clients with SUA contracts are entitled to the latest version of Synergize® at no additional cost.

Since the time from inception to completion is so short and because everything is visual and graphical, both the business analysts, developers and end users can quickly collaborate around how best to implement the solution, and specific process behaviours resulting in much higher levels of process understanding, therefore significantly lowering the cost to deploy and manage processes within an organization.

Adapt

With SynergizePS It is no longer necessary to re-write or discard previously created processes, which is often the case with traditional custom programs. Simply take an existing process, re-arrange the actions, add new ones to the process as required and voila, your process has been altered to keep pace with the evolutionary demands of the organization. Like all Microdea products, SynergizePS is designed to adapt to, and enhance your business processes, rather than forcing your business to operate according to the way the process was originally created.

Reduce Costs

Compared to traditional development methods, a complex process can be created and implemented within the SynergizePS, within hours versus the several days that would be required to create an equivalent process using traditional tools such as Visual Basic, PHP, .Net or Java. Given the high costs of development whether internal or outsourced and the huge always present backlog that exists within just about any IT department, an organization cannot reasonably justify not seeking out ways of significantly reducing development costs, and delaying providing businesses with timely process automations.

To learn why more executives and business owners are selecting Microdea as their strategic partner, call us 905.881.6071 ext. 263. Productivity and operational synergy are at the core of any successful business. Synergize® by Microdea is the vital technology link that integrates people, paper and processes into a streamlined, efficiently-operating enterprise. Because their documents are easier to create, distribute, access and exchange our clients are more profitable. As developers of the innovative Synergize® Document Automation Solution and patented Synergize OnRamp® In-Cab Scanning solution, Microdea's clients have access to advanced document, workflow and process management technologies. This cost-effectively automates and streamlines their paper-intensive business processes.
